

# The Kaivac Trash Compactor

Maintaining trash in a large facility is a big job. Schools, stadiums and airports may have dozens, if not hundreds, of trash receptacles that need constant refreshing. Not only is it an exhaustive task, but also makes trips to the dumpster a frequent distraction for staff members.

What if you could reduce waste volume by up to a third, or even a half? Kaivac's vacuum-powered Trash Compactor removes air from trash bags in seconds, significantly decreasing the size of each bag. Similar to food sealers, Kaivac bridges vacuum technology and hand-held functionality in a comprehensive attachment.

By reducing trash volume, employees are able to collect more at a time, stay on task and be more productive. As a result, trash cans and dumpsters will need less-frequent emptying.

## THREE WAYS TO BUY:

Five Pack of Compactor Wands

Compactor Wand with Can, One Twist Tie Canister and Holster

Compactor Wand with 8 Twist Tie Canisters and Holster

To operate, attach the wand to the end of the vacuum hose. Then insert wand into a full trash bag, wrap the liner around the wand head, turn vacuum on until it deflates, and remove the wand. Finally, spin the bag to secure, and tie a knot or fasten with a twist-tie.

## HIGHLIGHTS

- Reduces trash volume by up to one-half
- Smaller trash volume reduces trips to the dumpster
- Allows you to carry twice as much trash on your cart or truck
- Maximizes dumpster space and reduces hauling cost
- Simplifies trash handling
- Trash removal is more aesthetic for customers
- Works with any vacuum source
- Multiple package options to fit your situation

Don't just clean it.  
Kaivac it.™
